## SUMMARY

Versatile Site Engineer familiar with contractor needs and operational practices. Highly effective at staff leadership and site management. Specializing in construction.

Site engineer with several years of experience in engineering field. Expertise in coordinating with outside vendors and clients. Adept at creating budget plans and technical packages. Great organizational and analytical abilities.

## SKILLS

- To identify and resolve civil engineering issues, these professionals must be proficient in mathematics and physics. You work with complex formulas to understand and calculate building specifications. This ensures that the structure is in compliance with state and central building regulations.
- This position requires an understanding of design techniques and experience in developing models and charts. Employers prefer candidates with hands-on experience using computer-aided software (CAD) to plan, design and create building or infrastructure arrangements. In addition, having technical knowledge in quantity surveying, project billing, estimation and bar bending schedule can help you get hired.
- A part of a civil engineers job responsibilities includes overseeing the project completion from start to finish. They work with architects, contractors, engineers and other building professionals to ensure the project is on schedule. In addition, they allocate tasks to their team members and evaluate the project's timeline to ensure timely completion of work. This requires excellent project management skills.
- Effective communication
- Attention to detail
- Client relationship
- Scheduling and planning

- Team supervision
- Problem solving

---

## EXPERIENCE

**CIVIL SITE ENGINEER**, 02/2021 - Current

**Site supervisor** , Hyder, India

- Collaborated with architects and structural engineers on various aspects of construction projects.
- Surveyed sites, collected measurements, and assessed project conditions.
- Coordinated with other engineers and construction professionals to manage various stages of construction projects.
- Troubleshoot on-site technical problems, proposing effective solutions to prevent project delays.
- Conducted soil tests at construction sites prior to beginning new development projects.
- Supervised a team of junior engineers and construction workers, providing guidance and training.
- Coordinated the logistics of material delivery to ensure smooth project operations.
- Prepared progress reports outlining the status of ongoing construction activities.
- Performed calculations related to site grading, drainage, pavement design, erosion control systems and water supply systems.
- Provided technical advice to project workers to apprise of issues and implement proactive solutions.
- Assisted in the preparation of plans, specifications, reports and cost estimates for construction activities.
- Managed use of materials and equipment to prevent property loss and support availability.
- Resolved unexpected technical difficulties and communicated solutions with clients and representatives.
